

Binance Authentication & API Security Review

Client: Binance
Status: Open
Created: 10/16/2025

Findings

1. Binance API Authentication

Severity: High

Status: Open

The API authentication process does not properly validate expired JWT tokens. Attackers with intercepted tokens may reuse them for up to 10 minutes post-expiry. Immediate patch is recommended to reduce exposure window.

2. testing

Severity: Medium

Status: In Progress

testing again
